This Substitute Specification of the originally filed specification does not contain new matter.

Title

Configurable Eyewear

Cross-Reference to Related Application

This application claims the benefit of U.S. Provisional Application, Ser. No. 60/405,722, filed on August 26, 2002, entitled "Configurable Eyewear System," of Frank T. Brozowski, and which is incorporated into this current application.

Background of the Invention

While configurable eyewear is known in the art, the known configurable eyewear lacks the versatility and convenience of the current invention.

Summary of the Invention

The invention includes a configurable eyewear system that has at least one temple member and at least one lens, at least one first mating member and at least one second mating member, at least one connector, whereby the at least one temple member and the at least one lens being are rotatably connected by coupling the at least one first mating member and said at least one second mating member with the connector.
